

# LeadReach AI Corp. Business Plan

Core Technical Business Plan for the  
AI-Powered B2B Lead Generation Platform

A comprehensive business plan for LeadReach AI Corp., detailing the proprietary 8-agent autonomous lead generation platform, 17+ channel extraction infrastructure, dual-track B2B/B2C revenue model, 3-year financial projections, and investment terms for the Seed-plus funding round.

# 1. Executive Summary

LeadReach AI Corp. is a Delaware-incorporated technology company that has developed and deployed **LeadReach**, a proprietary AI-powered B2B lead generation and B2C AI Setter platform. The platform deploys eight specialized autonomous AI agents that collaborate across seventeen or more internet channels to discover, enrich, qualify, and outreach to prospects on behalf of enterprise and mid-market customers. Unlike legacy sales-intelligence tools that merely aggregate data, LeadReach operates as an **end-to-end autonomous pipeline**: from initial prospect identification through multi-channel outreach to pipeline management and report generation, requiring minimal human intervention.

The Company addresses a USD 78.3 billion global sales-enablement market (Grand View Research, 2024) that remains profoundly underserved by existing solutions. Current market leaders such as ZoomInfo, Apollo.io, and Lusha provide static contact databases with rudimentary scoring, leaving sales teams to manually orchestrate discovery, enrichment, qualification, and outreach across disconnected tools. LeadReach collapses this fragmented workflow into a single autonomous system, delivering measurable improvements: 40-60% reduction in prospecting time, 3-5x increase in qualified pipeline, and 30-40% conversion rates through AI Setter engagement versus 10-20% for human setters at one-tentieth the cost.

| Metric                                      | Value                    |
|---------------------------------------------|--------------------------|
| Total Addressable Market (TAM)              | USD 78.3 Billion         |
| Serviceable Addressable Market (SAM)        | USD 14.2 Billion         |
| Serviceable Obtainable Market (SOM, Year 3) | USD 42.6 Million         |
| Year 3 Annual Recurring Revenue (ARR)       | USD 38.4 Million         |
| Gross Margin (Steady State)                 | 82-87%                   |
| Net Revenue Retention Rate                  | 118%                     |
| AI Setter Conversion Rate                   | 30-40% (vs 10-20% human) |
| Customer Acquisition Cost (Year 3)          | USD 1,240                |
| Lifetime Value (Year 3 Avg)                 | USD 14,880               |

Table 1: Key Investment Metrics

The Company seeks USD 5,000,000 in Seed-plus funding to accelerate product development, expand go-to-market operations, and achieve USD 38.4M ARR within 36 months. The founding team has self-funded development to date, demonstrating both commitment and capital efficiency. The current platform is production-deployed with live customers generating revenue across four pricing tiers.

## 2. Company Overview

### 2.1 Corporate Identity

LeadReach AI Corp. is incorporated in the State of Delaware as a C-Corporation, the standard structure for venture-backed technology companies. The Company operates from its principal offices with a distributed engineering and go-to-market team. The corporate structure is designed to support future financing rounds, employee equity compensation, and eventual liquidity events, whether through strategic acquisition or public offering. All intellectual property, including the LeadReach platform source code, agent architecture, and proprietary AI models, is wholly owned by the Company with no encumbrances or third-party licensing restrictions.

| Attribute               | Detail                           |
|-------------------------|----------------------------------|
| Legal Name              | LeadReach AI Corp.               |
| Jurisdiction            | Delaware, United States          |
| Entity Type             | C-Corporation                    |
| Principal Product       | LeadReach Platform (Proprietary) |
| Industry Classification | SaaS / AI / Sales Enablement     |
| NAICS Code              | 5112 (Software Publishers)       |
| Fiscal Year             | January 1 - December 31          |

Table 2: Corporate Identity Summary

### 2.2 Mission & Vision

**Mission:** To eliminate the 65% of sales representative time currently wasted on manual prospecting, data entry, and unqualified outreach by deploying autonomous AI agents that discover, qualify, and engage high-intent buyers across every digital channel simultaneously.

**Vision:** To become the operating system for AI-driven revenue generation, where every sales team in the world has an always-on, self-improving AI workforce that delivers qualified pipeline on demand. We envision a future where the distinction between "sales tool" and "sales team" dissolves entirely, replaced by AI agents that learn, adapt, and execute with superhuman consistency and scale.

### 2.3 Product Tracks

LeadReach operates two complementary product tracks that serve distinct but overlapping market segments, creating cross-selling opportunities and multi-product revenue expansion within each account.

The B2B track serves sales teams seeking autonomous lead generation, while the B2C track serves businesses that need conversational AI to qualify inbound leads and book appointments automatically.

| Track               | Target Segment                      | Core Function                                                               | Key Differentiator                                                     |
|---------------------|-------------------------------------|-----------------------------------------------------------------------------|------------------------------------------------------------------------|
| B2B Lead Generation | Mid-market & Enterprise Sales Teams | 8-agent autonomous pipeline: Discovery, Enrichment, Qualification, Outreach | End-to-end automation across 17+ channels with zero manual prospecting |
| B2C AI Setter       | Service Businesses & Agencies       | AI-powered conversational qualification and appointment booking             | 30-40% conversion rate, 17+ languages, GoHighLevel CRM integration     |

Table 3: Product Track Overview

### 3. Market Opportunity & Analysis

#### 3.1 Total Addressable Market

The global sales-enablement technology market was valued at USD 78.3 billion in 2024 and is projected to grow at a CAGR of 12.8% through 2032, reaching approximately USD 206 billion (Grand View Research). This figure encompasses sales-intelligence platforms, CRM systems, outreach automation tools, conversation-intelligence software, and AI-driven prospecting solutions. The AI-specific segment within this market is growing at approximately 28.5% CAGR, driven by the rapid adoption of large language models and autonomous agent frameworks in enterprise workflows.

LeadReach targets a Serviceable Addressable Market (SAM) of USD 14.2 billion, defined as mid-market and enterprise organizations with 50-5,000 employees that maintain dedicated sales teams and currently spend more than USD 2,000 per month on sales technology stack. Within this SAM, the Company targets a Serviceable Obtainable Market (SOM) of USD 42.6 million by Year 3, representing approximately 0.3% of SAM, a conservative penetration rate consistent with early-stage SaaS companies achieving product-market fit in large markets.

| Market Layer                       | Size (USD)     | Growth Rate | Basis                                   |
|------------------------------------|----------------|-------------|-----------------------------------------|
| Total Addressable Market           | \$78.3 Billion | 12.8% CAGR  | Global sales-enablement technology      |
| Serviceable Addressable Market     | \$14.2 Billion | 18.2% CAGR  | Mid-market & enterprise, US + 5 markets |
| AI Sales Sub-Segment               | \$6.8 Billion  | 28.5% CAGR  | AI-driven prospecting & automation      |
| Serviceable Obtainable Market (Y3) | \$42.6 Million | -           | 0.3% SAM penetration, conservative      |

Table 4: Market Sizing Framework

### 3.2 Market Drivers & Tailwinds

Several structural forces are accelerating demand for autonomous AI sales platforms. First, the global talent shortage in B2B sales continues to intensify: the U.S. Bureau of Labor Statistics reports that sales representative turnover exceeds 35% annually, and the average time-to-productivity for a new sales hire is 9.1 months (SalesForce Effectiveness Council, 2024). This creates enormous economic pressure to automate the most time-intensive and lowest-value activities in the sales process, namely prospecting, data enrichment, and initial outreach.

Second, the proliferation of digital channels has fragmented the prospecting landscape. B2B buyers now interact across LinkedIn, email, Twitter, GitHub, Reddit, YouTube, and emerging platforms, making it impossible for human sales representatives to maintain effective presence across all channels simultaneously. LeadReach's 17+ channel coverage directly addresses this fragmentation, enabling simultaneous multi-channel engagement that would require a team of 8-12 human SDRs to replicate.

Third, the maturation of large language models (LLMs) has reached an inflection point where autonomous AI agents can perform complex, multi-step sales workflows with reliability levels sufficient for production deployment. The combination of reasoning capabilities (as demonstrated by GLM-4.6v-flash), retrieval-augmented generation, and multi-agent orchestration frameworks has moved AI sales automation from experimental to operationally viable. LeadReach's technical architecture is purpose-built to leverage this inflection.

Fourth, enterprise budget reallocation toward AI-powered tools is accelerating. Gartner projects that by 2027, 65% of B2B sales organizations will transition from intuition-based to data-driven selling, up from less than 30% in 2023. This shift represents a structural re-allocation of sales technology budgets away from static databases and toward intelligent, autonomous platforms like LeadReach.

### 3.3 Customer Segmentation

| Segment       | Company Size     | Annual Contract Value | Decision Maker  |
|---------------|------------------|-----------------------|-----------------|
| SMB / Startup | 10-49 employees  | \$1,788 - \$4,788     | CEO / Founder   |
| Mid-Market    | 50-499 employees | \$4,788 - \$47,880    | VP Sales / CRO  |
| Enterprise    | 500+ employees   | \$47,880+             | CRO / CTO / CFO |
| Agency        | 5-50 employees   | \$3,564 - \$35,640    | Agency Owner    |

Table 5: Customer Segmentation

## 4. Product & Technology Platform

### 4.1 Platform Architecture

LeadReach is built on a modern, cloud-native technology stack optimized for high-throughput AI agent orchestration and real-time data processing. The platform is implemented as a single-page application with server-side rendering, deployed on Next.js 16.1.1 with the App Router architecture and React 19, providing both performance and SEO advantages. The backend is powered by a Prisma ORM layer connected to a Supabase PostgreSQL database with pgvector extension support for semantic search and agent memory embeddings.

| Layer              | Technology               | Version        | Purpose                           |
|--------------------|--------------------------|----------------|-----------------------------------|
| Frontend Framework | Next.js + React          | 16.1.1 / 19    | App Router, SSR, SPA shell        |
| UI Components      | shadcn/ui + Radix        | 40+ primitives | Accessible, composable UI system  |
| State Management   | Zustand + React Query    | 5.0.6 / 8.21   | Client + server state             |
| Database           | Supabase PostgreSQL      | pgvector       | Relational + vector embeddings    |
| ORM                | Prisma                   | 6.11.1         | Type-safe database access         |
| Authentication     | Supabase Auth + NextAuth | 4.24           | OAuth, MFA, session management    |
| Payments           | Stripe                   | 22.2.0         | Checkout, webhooks, portal, usage |
| AI/LLM             | Zhipu AI GLM Models      | 4.6v / 4.7     | Reasoning, vision, chat           |
| Web Extraction     | Jina Reader + Exa        | Current        | Zero-config content extraction    |
| Data Visualization | Recharts + TanStack      | 2.15 / 8.21    | Analytics dashboards              |
| Animation          | Framer Motion            | Latest         | UI transitions and feedback       |

Table 6: Technology Stack

### 4.2 Multi-Channel Extraction Infrastructure

A core technical moat of the LeadReach platform is its multi-channel data extraction infrastructure, branded internally as **Agent-Reach**. This system provides zero-configuration access to seventeen or more internet channels for prospect discovery and data enrichment. Each channel implements a multi-tier fallback pipeline that ensures operational resilience even when individual data sources experience downtime or rate limiting. The architecture follows a principle of graceful degradation: the pipeline never returns zero results, always falling back to alternative sources or LLM-generated

knowledge when primary channels are unavailable.

| Channel    | Primary Backend     | Fallback Tiers               | Config |
|------------|---------------------|------------------------------|--------|
| Web        | Jina Reader         | LLM Knowledge                | Zero   |
| Exa Search | DuckDuckGo via Jina | z-ai SDK, mcporter, Jina API | Zero   |
| LinkedIn   | mcporter LinkedIn   | Jina Reader, Exa             | Zero   |
| Twitter/X  | Exa Semantic Search | Jina Reader                  | Zero   |
| YouTube    | yt-dlp              | Jina Reader                  | Zero   |
| GitHub     | gh CLI              | Exa, Jina                    | Zero   |
| Reddit     | Public JSON API     | Jina Reader                  | Zero   |
| RSS        | Feedparser          | Jina Reader                  | Zero   |

Table 7: Multi-Channel Extraction Overview (Selection)

## 4.3 AI Setter Platform

The AI Setter product track represents a significant expansion of LeadReach's addressable market into the B2C and service-business segment. The AI Setter is a conversational AI agent that operates across SMS, WhatsApp, Instagram, Facebook, and email to qualify inbound leads, handle objections, and book appointments directly into calendar systems. The platform integrates natively with GoHighLevel (GHL), the dominant CRM for marketing agencies, creating a seamless workflow from lead capture to appointment booking.

The AI Setter achieves conversion rates of 30-40%, compared to 10-20% for human setters, at a cost of USD 97-297 per month versus USD 2,000 per month for a human equivalent. It operates 24/7 across 17 or more languages and can handle more than 10,000 leads per day, compared to approximately 150 leads per day for a human setter. The platform includes built-in A/B testing for qualification scripts, objection-handling frameworks covering fifteen objection categories, and three response frameworks (Feel-Felt-Realized, Acknowledge-Bridge-Confirm, Listen-Acknowledge-Explore-Respond).

# 5. The 8-Agent Architecture

## 5.1 Agent Inventory & Role Assignment

The LeadReach platform deploys eight specialized AI agents, each with a distinct functional domain, dedicated channel assignments, and registered skill sets. This multi-agent architecture ensures that each stage of the sales pipeline is handled by a purpose-built agent with domain-specific prompts, scoring

frameworks, and data processing logic. The agents operate asynchronously and communicate through a shared database layer and event-driven orchestration system, enabling parallel execution of pipeline stages.

| # | Agent              | Primary Function                     | Channels         | Core Skills                                      |
|---|--------------------|--------------------------------------|------------------|--------------------------------------------------|
| 1 | Orchestrator       | Workflow coordination and delegation | None (delegates) | plan_workflow                                    |
| 2 | Prospect Discovery | Multi-channel prospect search        | 7 channels       | discover_companies, deep_search                  |
| 3 | Data Enrichment    | Firmographic and contact enrichment  | 5 channels       | enrich_leads, extract_contacts                   |
| 4 | Web Research       | Deep company and market research     | 7 channels       | research_company, market_analysis                |
| 5 | Lead Qualification | BANT/MEDDIC/ICP scoring              | 3 channels       | score_bant, score_meddlic, score_icp             |
| 6 | Outreach Composer  | Personalized message generation      | 3 channels       | compose_email, compose_linkedin, design_sequence |
| 7 | Pipeline Manager   | Stage management and follow-up       | Database         | manage_stages, schedule_followups                |
| 8 | Report Generator   | Analytics and AI-powered insights    | Database         | pipeline_report, ai_insights, action_items       |

Table 8: Agent Inventory and Capability Map

## 5.2 Agent Infrastructure Layer

Beneath the eight functional agents lies a comprehensive ten-module infrastructure layer that provides persistence, memory, scheduling, skill management, plugin extensibility, and observability. This infrastructure is what transforms LeadReach from a collection of AI prompts into a production-grade autonomous system. Each module is independently testable, replaceable, and horizontally scalable.

| Module   | Function                 | Technical Detail                                               |
|----------|--------------------------|----------------------------------------------------------------|
| Sessions | Persistent agent context | Context embeddings, cosine similarity search, token tracking   |
| Models   | LLM routing and fallback | Primary/fallback routing, vision support, usage metering       |
| Logs     | Structured observability | 6 categories: execution, model, channel, memory, skill, system |

|               |                           |                                                                       |
|---------------|---------------------------|-----------------------------------------------------------------------|
| Cron          | Scheduled task execution  | cron, fixed_rate, one_time schedules with retry                       |
| Skills        | Agent capability registry | Input/output schemas, handler mapping, metrics                        |
| Plugins       | Integration extensibility | 5 types: integration, enrichment, notification, automation, analytics |
| Profiles      | Agent identity management | Persona, tone, expertise, model preferences, rate limits              |
| Config        | Per-agent configuration   | Key-value store for model selection, rate limits, settings            |
| Keys          | API key lifecycle         | Rotation, environment scoping, access control                         |
| Documentation | Agent knowledge base      | Auto-generated agent documentation and manuals                        |

Table 9: Agent Infrastructure Module Inventory

## 5.3 Three-Tier Agent Memory System

LeadReach agents maintain a three-tier memory architecture that enables learning and adaptation over time. **Episodic memory** stores specific experiences and events with associated tags, allowing agents to recall past interactions with prospects and campaigns. **Semantic memory** stores learned insights with confidence scores, enabling agents to build domain expertise that improves scoring accuracy and outreach relevance. **Procedural memory** stores learned workflows with success rates, allowing agents to optimize their execution strategies based on historical performance data. All memory persists to the AgentTask database and loads on demand, ensuring that agent intelligence compounds over time.

# 6. Business Model & Revenue Streams

## 6.1 Pricing Architecture

LeadReach employs a tiered subscription model with both monthly and annual billing options. Annual plans are offered at a 17% discount to incentivize long-term commitments and reduce churn. The pricing strategy is designed to capture value at each customer maturity stage: the free Launchpad tier enables bottom-up adoption, the Scout and Command tiers monetize active users, and the Enterprise tier captures maximum value from large organizations. The Founders' Pass, a one-time lifetime payment, serves as a customer-acquisition vehicle during the early-growth phase while generating significant upfront cash.

| Plan      | Monthly | Annual | Agents | Leads/mo | Channels |
|-----------|---------|--------|--------|----------|----------|
| Launchpad | \$0     | \$0    | 2      | 100      | 3        |

|                |                  |            |           |           |             |
|----------------|------------------|------------|-----------|-----------|-------------|
| Scout          | \$149            | \$1,490/yr | 3         | 1,000     | 5           |
| Command        | \$399            | \$3,990/yr | 8         | 10,000+   | 17+         |
| Enterprise     | Custom           | Custom     | Unlimited | Unlimited | Custom      |
| Founders' Pass | \$2,497 one-time | -          | 8 forever | 15,000/mo | 17+ forever |

Table 10: B2B Lead Generation Pricing Tiers

| Plan   | Monthly | Annual     | Setters   | Leads/mo  | Channels    |
|--------|---------|------------|-----------|-----------|-------------|
| Setter | \$97    | \$970/yr   | 2         | 500       | SMS + Email |
| Closer | \$297   | \$2,970/yr | Unlimited | 10,000+   | All 5       |
| Agency | Custom  | Custom     | Unlimited | Unlimited | Custom      |

Table 11: B2C AI Setter Pricing Tiers

## 6.2 Revenue Composition & Unit Economics

The Company expects revenue to be composed of three primary streams: (1) recurring subscription revenue from monthly and annual plans, (2) overage and usage-based charges for customers exceeding plan limits, and (3) professional services revenue from Enterprise onboarding, custom integration, and white-label deployments. By Year 3, the projected revenue mix is 82% recurring subscription, 11% usage/overage, and 7% professional services. This composition reflects a healthy SaaS business with strong recurring revenue and limited dependency on non-recurring professional services.

| Metric                             | Year 1  | Year 2   | Year 3   |
|------------------------------------|---------|----------|----------|
| Average Revenue Per Account (ARPA) | \$3,480 | \$5,640  | \$8,520  |
| Customer Acquisition Cost (CAC)    | \$2,860 | \$1,920  | \$1,240  |
| Lifetime Value (LTV, 36-month)     | \$6,960 | \$11,280 | \$14,880 |
| LTV:CAC Ratio                      | 2.4:1   | 5.9:1    | 12.0:1   |
| Gross Margin                       | 68%     | 78%      | 85%      |
| Net Revenue Retention              | 105%    | 112%     | 118%     |
| Monthly Churn Rate                 | 4.2%    | 2.8%     | 1.6%     |
| Payback Period (months)            | 9.8     | 4.1      | 1.7      |

Table 12: Unit Economics Progression

## 7. Go-to-Market Strategy

### 7.1 Product-Led Growth (PLG) Motion

LeadReach's primary go-to-market motion is product-led growth (PLG), enabled by the free Launchpad tier that allows individual users and small teams to experience the platform's core value proposition without friction. The PLG flywheel operates as follows: users sign up for the free tier, experience autonomous prospect discovery and basic lead scoring, hit usage limits (100 leads/month, 3 channels, 2 agents), and upgrade to Scout or Command plans to unlock additional capacity and capabilities. This motion is complemented by in-app upgrade prompts that surface at moments of maximum value realization, such as when a user exhausts their lead quota during an active prospecting session.

The free tier also serves as a viral distribution mechanism. Each LeadReach user who discovers and outreaches to prospects through the platform creates a network effect: outreach messages generated by LeadReach carry subtle branding, and recipients who respond positively are exposed to the platform. This creates an organic demand-generation loop that reduces the effective customer acquisition cost over time.

### 7.2 Sales-Led Enterprise Motion

For Enterprise and Agency accounts, LeadReach employs a sales-led motion with dedicated Account Executives who engage CROs and VP Sales at target organizations. The enterprise sales cycle is supported by live product demonstrations, custom proof-of-concept deployments, and ROI analyses that quantify the specific value proposition for each prospect based on their industry, team size, and current sales technology stack. Enterprise deals are structured as annual or multi-year contracts with minimum commitments, ensuring predictable revenue and reducing churn risk.

The Company plans to build a Sales Development Representative (SDR) team that uses LeadReach itself as its primary prospecting tool, creating a compelling product-as-its-own-reference sales narrative. This "we eat our own cooking" approach resonates strongly with enterprise buyers who want proof that the platform works before committing to a contract.

### 7.3 Channel Partnerships & Agency Network

LeadReach intends to develop a channel partnership program targeting marketing agencies, sales consultancies, and CRM implementation firms. These partners will resell LeadReach to their client base, receiving a 15-25% revenue share on all subscription revenue they generate. The agency partnership model is particularly powerful for the AI Setter product track, as marketing agencies are the primary buyers of GoHighLevel and related tools, and the AI Setter integrates natively with GHL, creating a natural upsell path. The Company projects that channel partnerships will contribute 20% of new ARR by Year 3, with partner-sourced customers exhibiting lower CAC (approximately 40% below direct CAC)

and comparable retention rates.

## 8. Competitive Landscape

The competitive landscape for AI-powered sales tools is rapidly evolving, but LeadReach occupies a unique position at the intersection of sales intelligence, autonomous agents, and multi-channel outreach. Existing solutions fall into three categories: (1) data providers such as ZoomInfo, Apollo.io, and Lusha that offer contact databases with basic scoring; (2) outreach automation platforms such as Outreach.io, Salesloft, and Lemlist that automate email sequences but require manual prospecting; and (3) AI point solutions such as Clay, Lavender, and Regie.ai that enhance specific sales activities but do not provide end-to-end automation. No existing platform combines autonomous multi-channel discovery, AI-powered enrichment and qualification, personalized outreach composition, and conversational AI setter capabilities in a single product.

| Capability                 | LeadReach          | ZoomInfo   | Apollo.io  | Clay     | Outreach.io |
|----------------------------|--------------------|------------|------------|----------|-------------|
| Autonomous Discovery       | Yes (8 agents)     | No         | No         | Partial  | No          |
| 17+ Channel Coverage       | Yes                | No (3-4)   | No (5)     | No (3-4) | No (2-3)    |
| BANT/MEDDIC Scoring        | Yes (3 frameworks) | Basic only | Basic only | No       | No          |
| AI Outreach Composition    | Yes (4 frameworks) | No         | Basic      | Yes      | Basic       |
| Conversational AI Setter   | Yes (native)       | No         | No         | No       | No          |
| Multi-Agent Orchestration  | Yes (8 agents)     | No         | No         | No       | No          |
| 3-Tier Fallback Resilience | Yes                | No         | No         | No       | No          |
| GoHighLevel Integration    | Yes (native)       | No         | No         | No       | No          |

Table 13: Competitive Capability Comparison

### 8.1 Defensible Moats

LeadReach has constructed several layers of competitive defensibility. First, the **multi-agent architecture** with its ten-module infrastructure layer represents approximately 18-24 months of engineering effort to replicate, including the session management system, skill registry, plugin framework, and three-tier memory system. Second, the **17+ channel extraction infrastructure** with its multi-tier fallback pipelines requires ongoing maintenance and adaptation as websites change their structure, creating a continuous engineering investment that compounds over time. Third, **agent memory and learning** creates a data moat: as agents process more prospects and campaigns, their episodic, semantic, and procedural memories improve scoring accuracy and outreach relevance in ways that cannot be replicated by competitors starting from zero. Fourth, the **AI Setter with GHIL integration** creates switching costs for agency customers who embed LeadReach into their client service delivery workflows.

## 9. Financial Projections (3-Year)

### 9.1 Revenue Projections

The Company projects revenue growth from USD 1.2M in Year 1 to USD 38.4M in Year 3, driven by a combination of user acquisition through the PLG motion, expansion within existing accounts, and enterprise deal closures. Revenue projections are modeled bottom-up from customer acquisition targets and ARPA assumptions, cross-validated against top-down market penetration estimates. The Year 2 and Year 3 growth rates of 275% and 167% respectively are aggressive but consistent with SaaS companies at similar stages that have achieved product-market fit in large markets (e.g., Outreach.io grew from USD 3M to USD 50M ARR in its second and third years; Gong.io grew from USD 5M to USD 70M ARR in a comparable period).

| Metric                      | Year 1    | Year 2    | Year 3   |
|-----------------------------|-----------|-----------|----------|
| Total Customers (EOY)       | 345       | 1,420     | 4,506    |
| New Customers (Annual)      | 345       | 1,180     | 3,260    |
| Average Revenue Per Account | \$3,480   | \$5,640   | \$8,520  |
| Annual Recurring Revenue    | \$1.2M    | \$4.5M    | \$38.4M  |
| YoY Revenue Growth          | -         | 275%      | 753%     |
| Gross Margin                | 68%       | 78%       | 85%      |
| Gross Profit                | \$0.82M   | \$3.51M   | \$32.64M |
| Operating Expenses          | \$3.40M   | \$7.20M   | \$18.60M |
| EBITDA                      | (\$2.58M) | (\$3.69M) | \$14.04M |

Table 14: 3-Year Revenue and Profitability Projections

## 9.2 Operating Expense Breakdown

| Category                        | Year 1             | Year 2             | Year 3              |
|---------------------------------|--------------------|--------------------|---------------------|
| Engineering & Product           | \$1,440,000        | \$2,640,000        | \$5,760,000         |
| Sales & Marketing               | \$1,200,000        | \$3,120,000        | \$9,360,000         |
| General & Administrative        | \$480,000          | \$960,000          | \$2,160,000         |
| Infrastructure & AI Costs       | \$280,000          | \$480,000          | \$1,320,000         |
| <b>Total Operating Expenses</b> | <b>\$3,400,000</b> | <b>\$7,200,000</b> | <b>\$18,600,000</b> |

Table 15: Operating Expense Breakdown

# 10. Team & Operations

## 10.1 Founding Team

LeadReach AI Corp. was founded by a technical founder with deep expertise in AI systems, full-stack web development, and B2B sales processes. The founder has self-funded the development of the entire platform to date, demonstrating both commitment to the vision and capital efficiency in execution. The platform's sophisticated architecture, including the eight-agent orchestration system, ten-module infrastructure layer, and seventeen-channel extraction pipeline, reflects hands-on engineering capability and product judgment that would typically require a team of 8-12 senior engineers to produce.

The Company plans to use a portion of the Seed-plus funding to recruit key leadership positions: a VP of Engineering to scale the technical team, a VP of Sales to build and lead the enterprise sales motion, and a Head of Product to drive feature prioritization and user experience. These hires are expected to join within the first 6 months post-funding, with the engineering team scaling from 3 to 12 engineers by Month 12 and the go-to-market team growing from 2 to 15 by Month 18.

| Role                  | Year 1 (EOY) | Year 2 (EOY) | Year 3 (EOY) |
|-----------------------|--------------|--------------|--------------|
| Engineering & Product | 12           | 28           | 52           |
| Sales & Marketing     | 8            | 22           | 48           |
| Customer Success      | 3            | 8            | 18           |
| General & Admin       | 2            | 4            | 8            |

|                        |           |           |            |
|------------------------|-----------|-----------|------------|
| <b>Total Headcount</b> | <b>25</b> | <b>62</b> | <b>126</b> |
|------------------------|-----------|-----------|------------|

Table 16: Hiring Plan

## 11. Risk Analysis & Mitigation

Every early-stage investment carries material risks. LeadReach AI Corp. has identified the following key risk categories and developed specific mitigation strategies for each. Investors should evaluate these risks in the context of the Company's technical moat, market positioning, and the founding team's demonstrated ability to execute with capital efficiency.

| <b>Risk Category</b>      | <b>Description</b>                                                                                | <b>Likelihood</b> | <b>Mitigation</b>                                                                                        |
|---------------------------|---------------------------------------------------------------------------------------------------|-------------------|----------------------------------------------------------------------------------------------------------|
| LLM Provider Dependency   | Reliance on Zhipu AI for core reasoning; provider outages or pricing changes could impact service | Medium            | Multi-model architecture with fallback routing; planned expansion to OpenAI, Anthropic, and local models |
| Competitive Entry         | Well-funded incumbents (ZoomInfo, Apollo) could build similar agent capabilities                  | High              | 18-24 month technical moat; compounding data advantage from agent memory; faster iteration speed         |
| Channel Fragility         | Web scraping channels may break as websites update; LinkedIn may restrict access                  | Medium            | 4-tier fallback pipeline; zero-config channels; agent memory reduces channel dependency over time        |
| Customer Concentration    | Early revenue may be concentrated among a small number of large accounts                          | Medium            | PLG motion ensures broad customer base; no single customer exceeds 5% of revenue by design               |
| Regulatory & Data Privacy | Evolving data privacy regulations (GDPR, CCPA, AI Act) may restrict data collection               | Low               | Platform uses public data sources; compliance-by-design architecture; legal review of all channels       |
| Talent Acquisition        | Difficulty recruiting AI/ML engineers in competitive market                                       | Medium            | Founder technical depth reduces dependency; competitive equity packages; remote-first culture            |

Table 17: Risk Analysis Matrix

# 12. Investment Ask & Use of Proceeds

## 12.1 Offering Terms

LeadReach AI Corp. is seeking USD 5,000,000 in Seed-plus funding through the issuance of Series Seed-1 Preferred Stock. The offering is structured as a standard priced round with a pre-money valuation of USD 20,000,000, implying a post-money valuation of USD 25,000,000. Based on Year 3 projected ARR of USD 38.4M, this represents a post-money ARR multiple of 0.65x on Year 3 projections, which is highly favorable for investors compared to the median 8-12x forward ARR multiples for high-growth SaaS companies at similar stages.

| Term                            | Detail                                       |
|---------------------------------|----------------------------------------------|
| Round Type                      | Priced Round (Series Seed-1 Preferred Stock) |
| Raise Amount                    | USD 5,000,000                                |
| Pre-Money Valuation             | USD 20,000,000                               |
| Post-Money Valuation            | USD 25,000,000                               |
| Investor Ownership (Post-Money) | 20%                                          |
| Liquidation Preference          | 1x Non-Participating Preferred               |
| Anti-Dilution                   | Broad-Based Weighted Average                 |
| Board Composition               | 2 Founders, 1 Investor                       |
| Pro-Rata Rights                 | Yes, for all investors                       |
| Information Rights              | Quarterly financials, monthly KPIs           |

Table 18: Offering Terms Summary

## 12.2 Use of Proceeds

The net proceeds from the Seed-plus round will be allocated across four strategic categories designed to accelerate the Company toward its Year 3 ARR target of USD 38.4M. The allocation reflects the Company's stage-appropriate priorities: investing heavily in the product and engineering capabilities that constitute the core moat, while building the go-to-market infrastructure necessary to convert product advantage into revenue at scale.

| Category | Allocation | Amount (USD) | Key Activities |
|----------|------------|--------------|----------------|
|----------|------------|--------------|----------------|

|                             |     |             |                                                                             |
|-----------------------------|-----|-------------|-----------------------------------------------------------------------------|
| Product & Engineering       | 45% | \$2,250,000 | Agent architecture v2, multi-model support, enterprise features, mobile app |
| Sales & Marketing           | 35% | \$1,750,000 | Sales team, PLG optimization, content marketing, paid acquisition           |
| Infrastructure & Operations | 12% | \$600,000   | Cloud infrastructure, AI inference costs, security, compliance              |
| Working Capital & Reserve   | 8%  | \$400,000   | Hiring buffer, contingency fund, strategic opportunities                    |

Table 19: Use of Proceeds

## 12.3 Path to Series A

The Company anticipates raising a Series A round of USD 15-25M at Month 18-24, contingent on achieving the following milestones: (1) USD 4.5M ARR with month-over-month growth exceeding 10%, (2) net revenue retention exceeding 110%, (3) gross margin exceeding 75%, and (4) a clear path to EBITDA breakeven within 18 months of the Series A close. The Seed-plus round is designed to provide 18-24 months of runway, sufficient to achieve these milestones and demonstrate the business model's scalability to Series A investors. The projected Series A pre-money valuation range is USD 60-100M, representing a 3-5x step-up from the Seed-plus post-money valuation, consistent with high-performing SaaS companies at this transition point.
